

ECOSLATE

Slate is a rock that has been used for millennia as a floor and wall material due to its outstanding aesthetic and technical characteristics. Although natural slate is durable and easy to work with, it is a “soft” rock and slate floors are therefore easily prone to being scratched. With current technologies, porcelain stoneware offers us a wonderful opportunity to replicate, modify and improve what we find in nature, making it more economical and eco-sustainable thanks to the virtuous circle of ceramic production that allows for a reduced environmental impact compared to quarrying. The aesthetic offer is also expanded with different colours compared to the original grey or black of the slate and the graphic result is made more elegant and contemporary. Our Ecoslate collection, developed in four well-balanced colours, is available in various thicknesses (6 – 9 – 9.5mm and 2cm) and in different formats 30x60 – 60x60 – 60x120 – 90x90 to give you plenty of design options.

NOTICE TO TILE FIXERS

ATTENTION: Upon setting, choose tiles alternatively from different cartons (at least 5/8 cartons). Before tile setting, please verify shade, caliber and choice. Claims regarding these items cannot be accepted after tile setting. Considering the particular characteristics of this product, we suggest laying the tiles with grout joint of at least 3 mm. It is necessary to lay the material with double spreading technique.

INSTALLATION INSTRUCTION:

We recommend wet cutting or the score-and-snap method during the installation process.
Do not dry cut using power tools during the installation process.
Improper installation techniques could expose installer to harmful dust.

ECOSLATE

6 mm

*thin porcelain stoneware :
light and resistant*

Our Ecoslate 90x90 cm tiles are only 6 mm thick and suitable for a variety of different applications, such as flooring and wall cladding in residential and commercial spaces.

*suitable for renovation projects
installation on pre-existing surfaces
cost-saving*

Ecoslate thin tiles are ideal for renovation projects, because they can be applied to pre-existing materials avoiding demolition work with a significant reduction in time and costs.

easy to handle and lay

*The material lightness facilitates its handling and installation
The slim thickness simplifies cutting of tiles.*

high quality and performance

Porcelain stoneware is a durable, resistant material with nil porosity and high impermeability to water, acids and dirt.

eco-friendly solution

The manufacturing process of our thin tiles allows for a reduction in raw materials, water and energy consumption and lower CO₂ emissions. Tiling over existing material eliminates demolition waste.
